☐ POLARIS
(THE NORTH STAR)

EMILY'S SKY TIP:

- Find a dark place away from city lights.
- Choose a clear night without clouds.
- Give your eyes 20 minutes to adjust to the dark.
- Look for different constellations in different seasons.
- Start with bright, easy-to-find constellations (Orion, Cassiopeia).
- Use a star map or stargazing app if you need help.
- Most constellations can be seen without a telescope.
- Be patient and enjoy exploring the night sky!
